

Balancing excellence and social inclusion: the risk of elitism. Working for the utopia of excellence for all.

There is always space close to those who excel for others to learn and benefit from

Focus on individual talents: that is excellence

Excellence should relate to quality, cooperation and inclusion

Excellence becomes more inclusive when it is shared and transmitted.

Provide to all the right opportunities. So everyone can meet his/her own excellence

It's more about becoming excellence and growing. We have to reload the word excellence. It is very important for all of us!

A world, where anyone, despite background, can be an excellent student and worker, if they are willing to work hard enough, with necessary tools and help for the ones who need it.

Each individual has their own heights. Digitization should not be the only setting - it should promote the development of the individual in the educational process.

Each individual has their own heights. Digitization should not be the only setting - it should just promote the education process

Digitilisation in education: powerful tools for inclusion and raising risks of inequalities.

Many opportunities that come from digitalization, but many issues that have to be ironed out (software should be paid by schools, computers should be provided for the ones without)

Specialised training on the use of digital tools to enable a better teaching

Digitalization may indeed reduce the gap in social differences but there is a strong need for intergenerational approaches that enable all people to benefit from it.

Opportunities and risks at the same time. Learn to use profitably and take advantage of these tools is our role

If the world of work and education is completely digitalized, this required that all people should have access to technology.

It could support inclusion if we will focus on using digital tools such way, in case not, it could mean deeper inequalities

There are both opportunities and risks: digitalization broadens the scope and area where knowledge can be transferred but it reduces socialization and direct communication which are indispensable for people's well being and mental health.

We haven't to work together and make a blend of possibilities for and with the student

Better inclusion. Cooperation, collaboration

Digitilisation in education: powerful tools for inclusion and raising risks of inequalities.

sound online not working

There is no sound from the online broadcast

Sound is not working

Not working the audio in english

Digitalisation in education used as a better tool for a better education process

Yes!

Yes!

a

In Czechia we use NGEU for financing of advanced technologies at schools. In the same moment we invest in repository of IT for those in need. And in addition we provide tutoring for students who were affected by covid restrictions and for refugees

Digitilisation in education: powerful tools for inclusion and raising risks of inequalities.
